

Ambulance Victoria's Performance

2018/19 Quarter 4 (1st April 2019 to 30th June 2019)

Ambulance Victoria has two official response time targets:

Respond to Code 1 incidents within 15 minutes for 85% of incidents state-wide, and Respond to Code 1 incidents within 15 minutes for 90% of incidents in centres with populations greater than 7,500.

Response times are an important measure of the service we provide, but are only one of a number of measures used to gauge the effective delivery of an ambulance service.

Our response times are measured from the receipt of the triple zero (000) call until paramedics arrive on scene. Response times are influenced by many factors including traffic, distance required to travel, availability of ambulances and demand for our services.

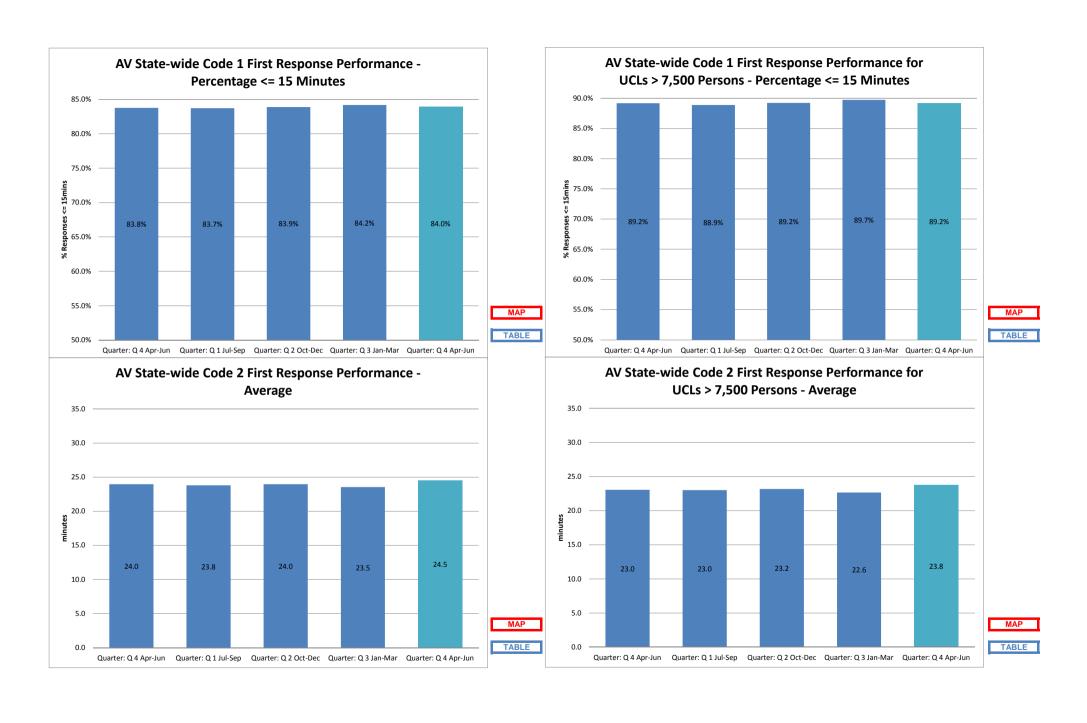

We designate those patients that require urgent paramedic and hospital care as "Code 1," and these patients receive a "lights and sirens" response. The tables below provide information about our Code 1 response time performance by both Local Government Area (LGA) and Urban Centres and Localities (UCL).

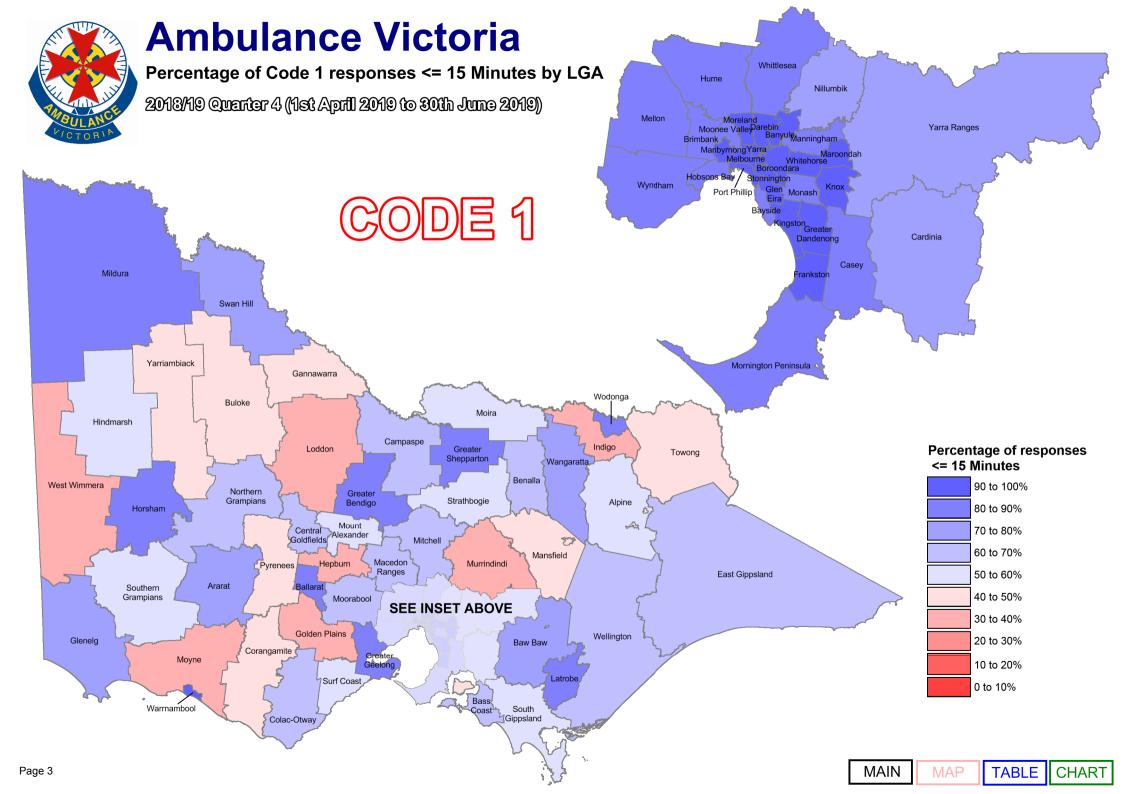

Code 2 incidents are acute, but not time critical and do not require a lights and sirens response. AV's average Code 2 response time performance has also been provided.

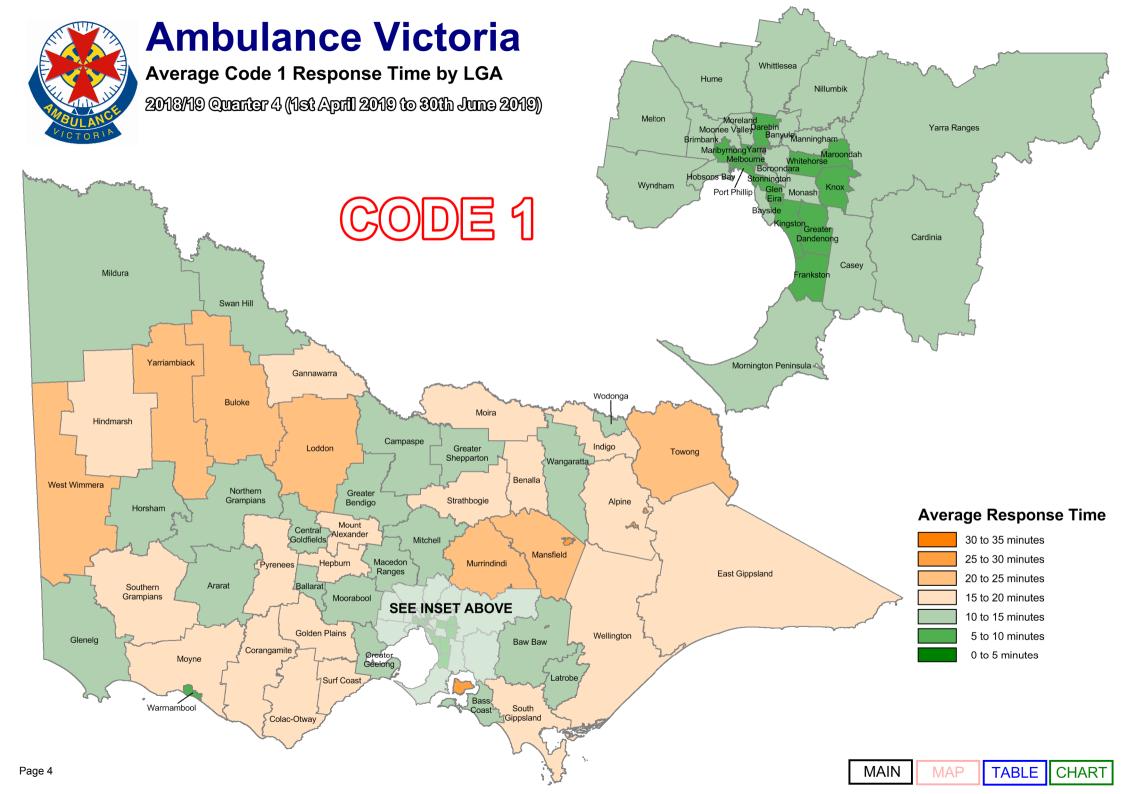

As part of our process of continual improvement, the response time performance shown below has been calculated using data sourced from the Computer Aided Dispatch (CAD) system used across Victoria. Definitions can be found in the Glossary at the end of this document.

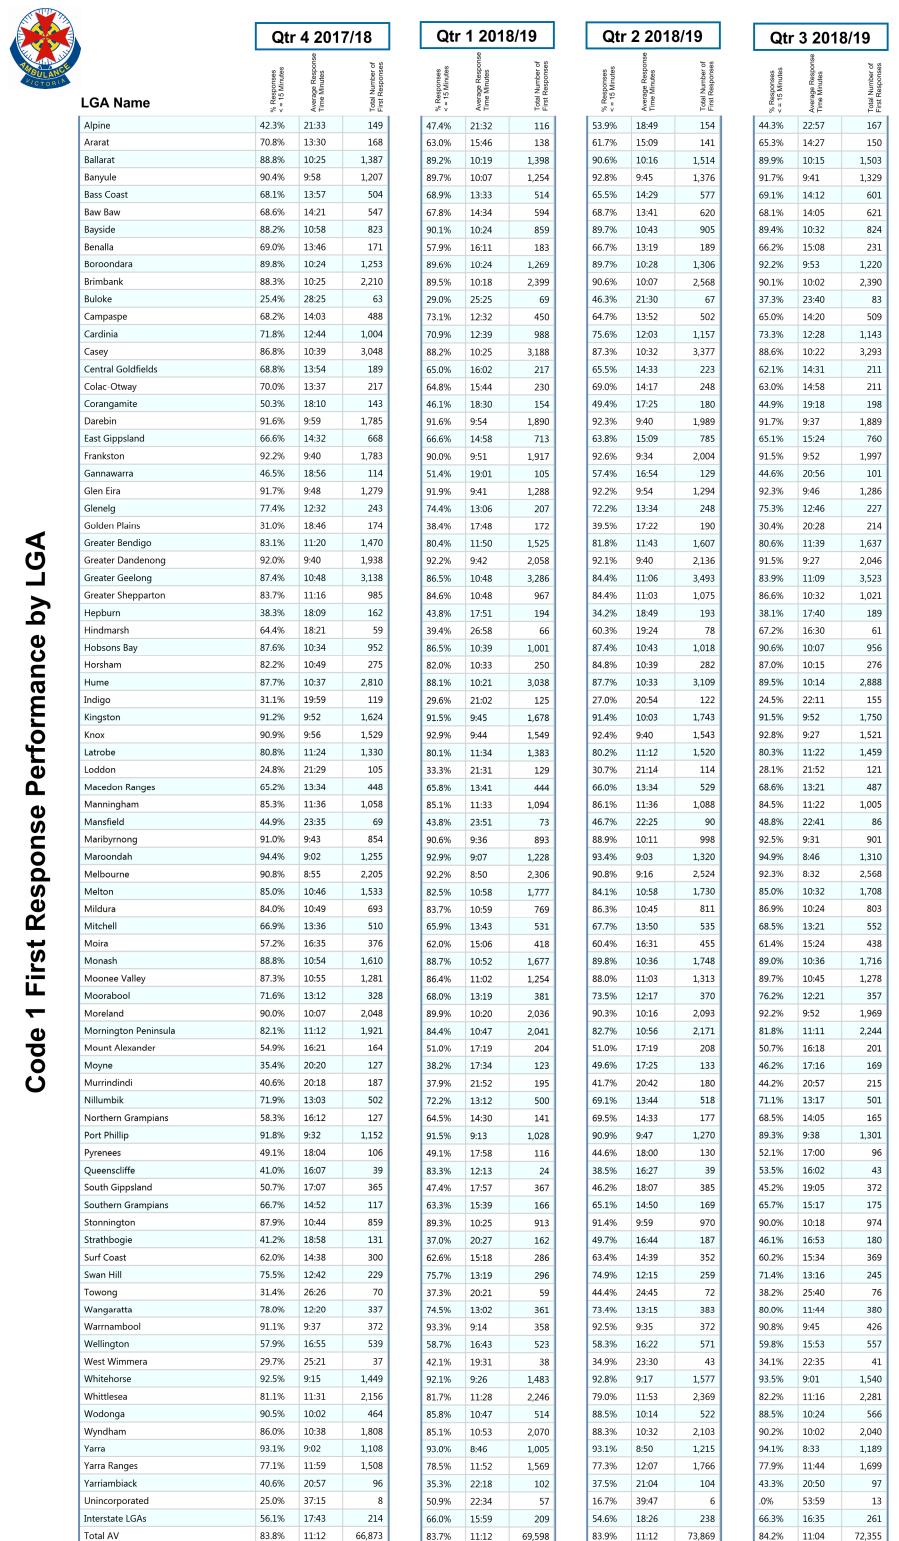

Report Navigation This table shows the response time measures published in this document. Clicking on the items Map, Table and Chart will take you to the appropriate page.

* The Maryborough (Vic), Wonthaggi and Yarrawonga - Malwala (Yarrawonga Part) UCLs were redefined by the Australian Bureau of Statistics in the 2016 census as having a population greater than 7,500 people. The Melbourne UCL was redefined by the Australian Bureau of Statistics in the 2016 census to include the area which was previously the Pakenham UCL. Ambulance Victoria has implemented 2016 census changes from 1st July 2018. The prior data is based on the UCLs defined in the 2011

census.

MAIN MAP

CHART

Glossary

Response Time	Response time measures the time from a triple zero (000) call being answered and registered by the Emergency Services Telecommunications Authority (ESTA), to the time the first AV resource arrives at the incident scene. Response times are based on data sourced from the Computer Aided Dispatch (CAD) system.	
Code 1 incident	Code 1 incidents require urgent paramedic and hospital care, based on information available at time of call.	
Code 2 incident	Code 2 incidents are acute and time sensitive, but do not require a lights and sirens response.	
% <= 15mins	This is the percentage of Code 1 first responses arriving in 15 minutes or less. This is calculated by dividing the number of Code 1 first responses arriving in 15 minutes or less by the total number of Code 1 first arrivals. When AV respond to an incident, we sometimes dispatch multiple AV resources to that incident. "First response" refers to the first AV resource to arrive at the incident scene.	
Average Response Time	The average response time is the average response time for the area being reported, which is calculated by dividing the sum of the response times by the number of response times within the area being reported. The average response time is provided in minutes and seconds.	
Number of First Responses	This is the total number of first arrivals within the reported time period.	
UCL (Urban Centres Localities)	These are geographical areas based on the Australian Bureau of Statistics Urban Centres and Localities (UCLs) boundaries and residential population. Ambulance Victoria reports performance for larger UCLs where population exceeds 7,500 persons.	
LGA (Local Government Area)	Local government in Victoria comprises of 79 municipal districts. They are often referred to as local government areas (LGAs). The number of LGAs and their boundaries can change over time. LGAs are as defined by Local Government Victoria, which is part of the Department of Transport, Planning and Local Infrastructure.	
Interstate LGAs	Incidents responded to by AV resources outside the Victorian LGA Boundaries
